DETAILED ACTION

Drawings

1. The drawings are objected to because
 - a. Fig. 4, element 329, applicant uses "materic". Examiner assumes "metric".
- Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities:
 - a. Pg. 1, examiner suggests applicant delete space above heading.
 - b. Pg. 7, line 15, applicant makes reference to a "G-RAKE and IW-RAKE".

Examiner suggests applicant spell out the first instances of all acronyms for clarification purposes.

Appropriate correction is required.

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Allowable Subject Matter

4. Claims 1-48 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter: The instant application discloses a method of recovering information encoded in a spread spectrum signal transmitted in a communications medium. Prior art references show similar methods (Wang et al. US Patent 6,125,137) but fail to teach **"estimating noise correlation among the time-offset correlations to produce noise correlation estimates; selecting a subset of the time-offsets from the set of time-offsets based on the noise correlation estimates; correlating the composite signal with a traffic spreading sequence at each of the time-offsets in the selected subset of**

the time-offsets to produce a plurality of traffic correlations”, as in claim 1, 25, 28 and 36; and “a correlation timing determiner circuit that selects a set of correlation times based on the times at which multipath versions of a desired signal are received; a correlation circuit, operatively associated with the correlation timing determiner and responsive to a received composite signal, that generates respective time-offset correlations of the composite signal with a sequence at respective correlation times of the selected set of correlation times; a noise correlation estimation circuit that estimates noise correlation; a combining finger selector circuit that selects a subset of the correlation times based on the noise correlation estimates; and a combiner circuit that combines correlations of the composite signal at the selected subset of the correlation times with a traffic spreading sequence to produce an estimate of information contained in the composite signal”, as in claim 30 and 43.

Conclusion

6. This application is in condition for allowance except for the following formal matters:

- a. Drawing objections
- b. Specification objections

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
